

【Git】 windows系統 warning: LF will be replaced by CRLF in

windows系統下使用git出現：warning: LF will be replaced by CRLF in

```
$ git add readme.txt readme.txt
warning: LF will be replaced by CRLF in learnngit/readme.txt.
The file will have its original line endings in your working directory
```

原因是windows系統的換行符和Unix下的換行符不同，但是git會幫我們自動進行換行符的轉換，所以出現了這個warning

```
# 解決的方法就是，禁止自動轉換：
$git config --global core.autocrlf false
```
