

【Python】常用自訂函數

特數字元轉譯

```
def escape_string(input_string):
    special_chars = ['<', '>', '&', '*', '_', '~', '`', '|', '#', '!']
    escaped_string = ""

    for char in input_string:
        if char in special_chars:
            escaped_string += '\\' + char
        else:
            escaped_string += char

    return escaped_string
```
