

【React】建立React 環境

引入js

```
<script crossorigin src="https://unpkg.com/react@18/umd/react.development.js"></script>
<script crossorigin src="https://unpkg.com/react-dom@18/umd/react-dom.development.js"></script>
<script src="https://unpkg.com/babel-standalone@6/babel.min.js"></script>
```

建立根物件

```
<div id="root"></div>
```

渲染Dom物件

Hello React

```
<script type="text/babel">
function App(){
  return <h1>Hello React</h1>
}

const el = document.getElementById("root");
const root = ReactDOM.createRoot(el);
root.render(<App />);
/* 簡易寫法
ReactDOM
  .createRoot(el)
  .render(<App />);
*/
</script>
```
