

TestController.kt

TestController.kt

```
@RestController
@RequestMapping("/api/test")
@CrossOrigin(origins = ["*"])
class TestController {
    private val logger = LoggerFactory.getLogger(this::class.java)
    @GetMapping("/test")
    fun test(): String {
        logger.info("TestController")
        throw Exception("demo exception")
        return "Hello World"
    }

    @PostMapping("/test")
    fun testPost(@RequestBody test:Any?): ResponseEntity<Any>{
        logger.info("test"+ test.toString())
        return ResponseEntity.ok(test)
    }
}
```
