

【Shell】 【tip】 使用暫存表，更新 crontab

```
#!/bin/bash
# $$ => pid，使暫存檔名不重複
tmp_file=/tmp/cron$$

# 利用trap 刪除暫存檔
#This installs a trap handler for exit (0) and signals 1 (SIGHUP), 3 (SIGQUIT) and 15 (SIGTERM)
# that removes a file presumably storing a process ID.
#See man 3 signal for details about signals.
trap "rm -rf $tmp_file" 0 1 3 15

cat > $tmp_file << EOF
*/10 * * * * echo "Hello World"
EOF

cat $tmp_file
cat $tmp_file | crontab
```
